Unique Finish

Our stainless steel products are given a Bright and Reflective finish by Electropolishing. The surfaces are Electropolished and Passivated to Enhance its appearance and to prevent Corrosion, particularly in Chlorine and Saltwater Environments.

Features

- Architecturally Designed.
- Hygienic and Easy to Clean.
- Environmentally Friendly Hair and Lint Filter.
- Fast Water Drainage.
- Easily Installed.
- No Adaptors required for Installation.
- 16mm Low Profile to allow to be set on the same base as used by tiles.

Sizes

- Standard 75mm and 100mm wide - can be custom built up to 300mm wide
- Can be made any length.
- Standard lengths - 600mm, 700mm, 800mm, 900mm, 1000mm and 1200mm. Available in both 75mm wide and 100mm wide, plus 100mm x 100mm and 200mm x 100mm.
- Standard outlets are 50mm diameter and can be positioned to customer requirements.
- 75mm diameter outlets also available in the 100mm wide profiles.

Installation.

- 1 All water proofing should be completed before installation of the grate.
- 2 Any excess mortar/adhesive that has fallen into the floor drain should be removed before installation of the grate. This can be the main cause of drain blockage.
- 3 The grate should be set level to or just below the tile surface.
- 4 The outlet tube should not be sealed to the floor drain. This allows for the excess water that seeps through the tile grout to escape into the drain.
